**Lab Case Number:15-1234**  
**Client Case Number: Doe**

**Specimen List**

Client Item	ICLab Item	Description
1	2015-00008	– Victim reference from Jane Doe
2	2015-00009	– Suspect reference from John Doe
3	2015-00010	– Stain on victim's shirt
4	2015-00011	– Stain on suspect's shirt

The evidence will be returned to the client.

**Conclusions**

Presumptive tests for blood of items 2015-00010 (stain on victim's shirt) and 2015-00011 (stain on suspect's shirt) were positive.

The autosomal STR DNA profile developed from the stain on the victim's shirt (2015-00010) matches the DNA profile of the suspect reference sample (2015-00009). The expected frequency for this profile in the general population is less than 1 in 999 trillion.

The autosomal STR DNA profile developed from the stain on the suspect's shirt (2015-00011) matches the DNA profile of the victim's reference sample (2015-00008). The expected frequency for this profile in the general population is less than 1 in 999 trillion.

The results of the DNA analysis are shown in Table 1 on page 2.

Genetic analysis involves procedures that include detergent and protein digestion, with or without differential DNA extraction, PCR amplification of specific DNA markers and STR analysis by capillary electrophoresis.

[ ] indicates minor contributor, NR indicates no result, INC indicates inconclusive results.
